D-SUB | MICRO-D AXON' BACKSHELLS EASY CABLING AND EMI* PROTECTION

OUR EXPERTISE

Backshells: your protection against electromagnetic interferences

Any equipment can be affected by the presence of EMI. To solve this issue, Axon' offers not only optimised connections, but also backshells. True allies against interferences, they are directly placed behind the connector and protect the link, thus increasing performances. Backshells made with different materials, sizes and plating are available for your specific applications.

*EMI : Electromagnetic interferences

MAKE THE RIGHT CHOICE

Easy cabling: easy mounting, optimised installation, and quick modification if necessary

Compliant with standards
(Sub-D: MIL-DTL-24308
Micro-D: MIL-DTL-83513)

Made In Axon' design and manufacturing

Custom-designed solutions: a lot of possibilities thanks to a large choice of funnels, surface treatments, accessories...

Optimisation: monobloc or modular format in 3 parts: direct access to the wiring space, and purchase of single parts is possible

Several thousand references in stock. Contact us for any emergency

Hotline: our experts at your disposal: advice, optimisation, alternatives...

ACCESSORIES:

CLOSE TO YOUR NEEDS

To go further, Axon' offers a range of accessories compatible with Sub-D backshells.

Hardware: build your system to your own mounting requirements.

Axoclamp®: clamping bands allows for a -360° shield termination at the rear of connectors.

Halorings: Comb for shield grounding of a cable composed of several wires and shielded pairs. Direct connection between the Sub-D connector and the shell or on the connector.

Axotress: braid designed to improve the EMC performances.
